DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 4, 6-10, 14, 16, 18 and 20-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Lofthouse-Zeis et al.

With respect to claims 1, 9 and 14, Lofthouse-Zeis et al disclose temperature correction circuit for wavelength stabilization in thermo-electric cooler coupled to a laser diode comprising a laser diode (12) is coupled to a thermo electric cooler (13), the initial temperature of the thermo-electric cooler (13) is regulated at a predetermined set point temperature as determined by a user input (17) to produce a low power mode for maintaining the laser diode at a predetermined temperature, which is consider as a low power mode, the temperature correction loop (18), maintains the laser diode at temperature that corresponds to a predetermined wavelength of light output detected by the optical sensor (23) from the laser diode, is functioning as a standard mode, the temperature regulation circuit (16) is consider as a switching, note col. 3 line 44 to col. 6 line 37, see figs. 2-4b.

With respect to claims 4, 6-8, 10, 16, 18 and 20-22, Lofthouse-Zeis et al disclose the predetermined range of temperature is determined by a user setting a temperature measure above and below a fixed temperature that corresponds to a

Application/Control Number: 09/751,996

Art Unit: 2828

wavelength of light output from the laser diode, the laser diode has a user defined power versus performance ratio and thermo-electric cooler in a quasi standard modem the laser configured to transmit signals in the quasi standard power mode, note col. 1 line 12 to col. 6 line 37, see figs. 1-4b.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - 1. Determining the scope and contents of the prior art.
 - 2. Ascertaining the differences between the prior art and the claims at issue.
 - 3. Resolving the level of ordinary skill in the pertinent art.
 - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 2-3, 5, 11-13, 15, 17 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lofthouse-Zeis et al ('574) in view of Abeles et al ('237).

With respect to claims 2-3, 5, 11-13, 15, 17 and 19, Lofthouse-Zeis et al disclose all limitations as set forth in claims 1, 9 and 14. However Lofthouse-Zeis et al do not disclose TDM, DWDM mode and a SONET. Whereas Abeles et al disclose TDM, DWDM mode and a SONET, note col. 7 line 1 to col. 15 line 54, see figs 1-12. For the benefit of the operating the thermo-electric cooler in a low power mode and a standard

Application/Control Number: 09/751,996

Art Unit: 2828

mode, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide Lofthouse-Zeis et al with the TDM, DWDM mode and a SONET as taught or suggested by Abeles et al.

Response to Arguments

4. Applicant's arguments with respect to claims 1-22 have been considered but are most in view of the new ground(s) of rejection.

Citation Of The Pertinent References

5. The prior art made of record and not relied upon us considered pertinent to applicant's disclose.

The patent to Burbidge et al (US patent 6,101,200) disclose laser module allowing simultaneous wavelength and power control.

The patent to Muller et al (US patent 5,088,098) disclose thermo-electric cooler control circuit.

The patent to Levinson (US patent 5,019,769) discloses semiconductor laser diode controller and laser diode biasing control method.

Communication Information

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tuan M Nguyen whose telephone number is (703) 306-0247. The examiner can normally be reached on 8am to 5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Paul Ip can be reached on (703) 308-3098. The fax phone numbers for the

Art Unit: 2828

organization where this application or proceeding is assigned are (703) 872-9318 for regular communications and (703) 872-9319 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 306-3329.
